## TO TRAIN THE MODEL \_MODEL BUILDING

we are going to train Linear Regression model; we need to split out the data into two variables x and y where x is independent on x (output) and y is dependent on x(output) address column as it is not required our model

```
In [16]: x= ssd[['Impressions', 'From Home', 'From Hashtags', 'From Explore',  
              'From Other', 'Saves', 'Comments', 'Shares']]  
y=ssd['Likes']
```
